Accenture, Aligned Technologies, Alpha Sirius, Capgemini, Celtic, CSC, IBM, Northrop Grumman

Product Certifications

Certified for SAP NetWeaver®

Worksoft Corporate Overview

Worksoft® is an innovative provider of comprehensive solutions that optimize lifecycle management for SAP® applications. Worksoft solutions are specifically designed for the unique architectures of SAP application environments and the specific needs of both business and technical SAP users. Worksoft customers realize significantly reduced total cost of ownership, more visibility into business process changes and faster deployment times.

Founded in 1998 and headquartered in Dallas, TX, Worksoft is privately held by Austin Ventures and Crescendo Ventures. Worksoft was first to market with Worksoft Certify®, a cross-platform functional testing solution that does not require scripting or custom coding which is a trait of most legacy test automation products. Worksoft Certify validates cross-platform business processes using an object oriented approach—which makes it easy for business users to operate. Worksoft Certify supports applications that span these platforms and interfaces: SAP, web-browser, web services, Java, Microsoft .NET, mainframe, Visual Basic and more.

Our Customers

Worksoft serves large to medium enterprises managing complex, global SAP environments. Many are blue-chip corporations within the Fortune 1000 and considered to be among the best managed and most successful companies in their respective industries.

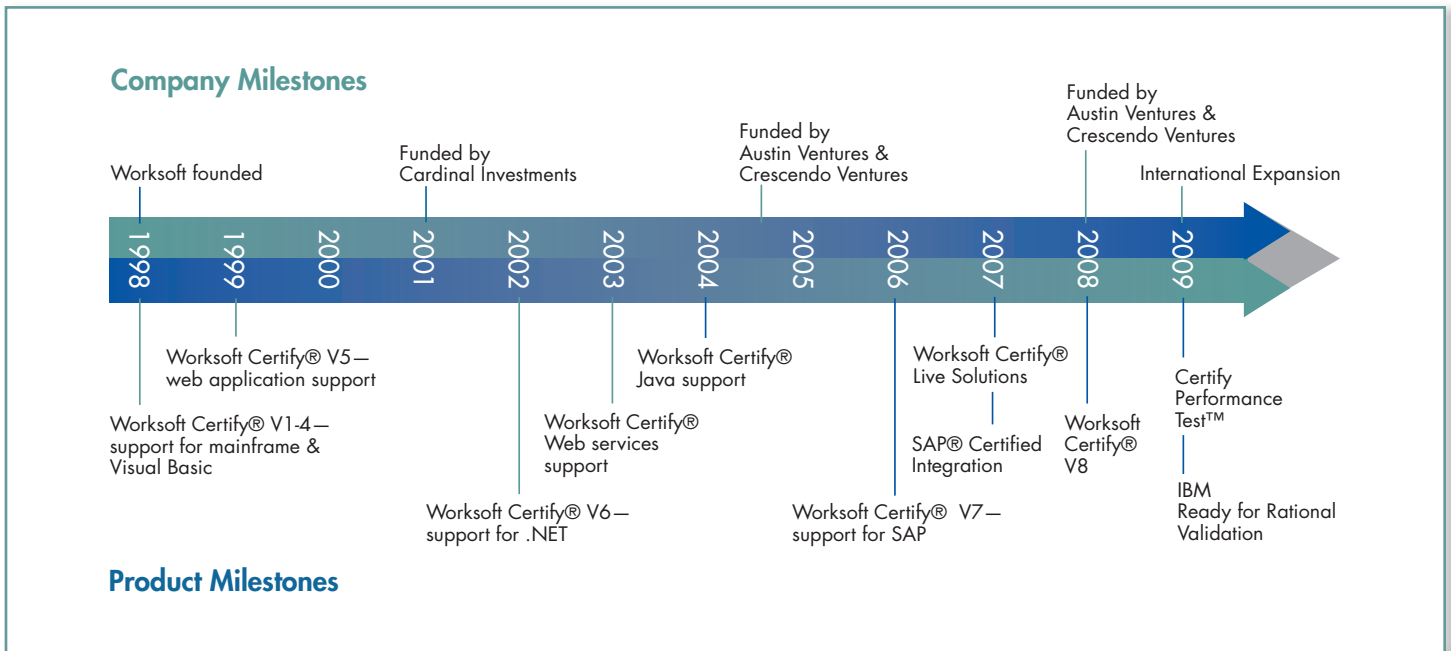

Worksoft delivers specific vertical expertise and best practices to SAP customers spanning manufacturing, financial services, energy, government, healthcare, retail, transportation and technology sectors. Most of our customers operate in process intensive, highly regulated industries running global operations over cross-platform technology environments.

Our Solutions

The Worksoft lifecycle management suite delivers a comprehensive and integrated solution for managing the impact and risk of recurring changes in your SAP environment, providing:

- Impact analysis capabilities highlighting the impact that application changes will have on your business processes, thus preventing disruptions in application performance and availability.

WORKSOFT®

- A revolutionary approach to business process validation that removes the need for costly and complex custom code, empowering business process experts to validate and document changes to critical enterprise processes.
- A reusable repository of SAP business process knowledge based on common SAP transaction codes and best practices which accelerate your validation projects and ensure integrity within your SAP business processes.
- Documentation that is automatically generated based on validation results, thus aiding in your compliance, training and reporting requirements without requiring manual intervention or expensive custom services.

Why Worksoft?

Our customers run forward-thinking organizations that embrace change and continue to evolve their complex SAP deployments. They rely on Worksoft to optimize the lifecycle management of their SAP applications in order to reduce total cost of ownership. They maintain control over software license and maintenance costs while taking advantage of new SAP upgrades and service packs with minimal impact on business processes and user productivity.

Our customers have reduced their operating costs by up to 80% and saved thousands of hours by automating their business validation lifecycle. Worksoft has specialized solutions which are proven to accelerate the following projects:

- New implementations and deployments of SAP applications or SAP modules
- Major SAP upgrades including SAP 6.0 (ECC 6.0) and SAP Business Suite 7
- Recurring service packs and enhancement packs from SAP
- New business processes or changes to existing business processes
- Other SAP customizations and/or SAP migrations
- Validation of business processes which cross multiple applications, including ERP, Java, .Net, iSeries, mainframe and custom

Worksoft software and services benefit senior IT executives, systems/operations management, business analysts, software developers and QA/testing personnel.
