

Intelligent Automation for Digital Business

Today, every business is a digital business. End-to-end business processes can span dozens of enterprise applications and digital platforms - and every one of them needs to perform as designed. Disruption to business continuity is unacceptable in this rapidly changing application landscape where delays can keep companies from achieving strategic business outcomes.

First generation manual testing and scripting approaches are no longer enough when it comes to ensuring enterprise application quality. Global 5000 companies are adopting code-free automation to deliver value to the business faster, cheaper, and more efficiently than ever before.

Worksoft's automation solutions for discovery, compliance, documentation, testing and RPA help companies replace manual effort, significantly improve quality, and increase business agility, all while shortening timelines and reducing risk.

Whether your business relies on SAP, Oracle, Salesforce.com, Workday, SuccessFactors, Ariba, Hybris, ServiceNow or other enterprise apps, automation helps organizations:

- Deploy new technology faster and shorten project timelines
- Achieve the highest level of quality business execution by automatically discovering and testing crucial processes
- Eliminate the time, cost, and manual effort with automation for discovery, documentation, compliance and testing

ACCELERATE EVERY DIGITAL PROJECT

- SAP S/4HANA
- Agile & DevOps
- New Implementations
- Upgrades
- Consolidations
- Cloud Apps
- Web & Mobile Apps

REDUCE TECHNOLOGY RISK

90%

automation of core business process validation for high quality

ACCELERATE IT PROJECTS

40%

faster projects, upgrades, and new implementations

IMPROVE EFFICIENCY

50,000

hours saved annually and millions in cost savings with automation software

Worksoft Analyze

Worksoft Analyze delivers automated business process discovery and visualization for companies that rely on enterprise applications. Automatically capture and understand every critical business process and variation. This unique approach dramatically reduces the time and effort needed to create and execute automated end-to-end business process tests.

Worksoft Certify™

Worksoft Certify delivers speed and agility by automating the testing of end-to-end business processes across all enterprise applications – from mobile, to desktop, to mainframe. The solution helps companies ensure critical business processes continue to function as designed even as changes are made to underlying applications. Its highly adaptive, patented object action framework technology eliminates traditional test coding, reduces test maintenance, and delivers resilient, reusable libraries of tests.

Worksoft Impact

Worksoft Impact is an easy-to-use risk-based testing solution that automates the identification and analysis of SAP transports and provides lists of impacted transactions, examines existing test coverage, and pinpoints gaps. This enables users to identify risks, focus testing efforts, and accelerate SAP release cycles without business disruption.

Worksoft Business Process Procedure (BPP)

Worksoft BPP generates comprehensive business process documentation from Worksoft Certify business process execution. With all critical end-to-end processes discovered and tested, companies can simply and effectively create “just-in-time documentation” of test results, and easily meet compliance needs.

Worksoft Execution Manager

Worksoft Execution Manager gives users the control to schedule and run Worksoft Certify tests whenever they want, in parallel and at scale. Maximize the value of your investment in automation with unattended, around the clock testing. Running tests in parallel allows customers to scale their regression testing to cover every process, every day.

Are you ready to find out what value you, your team, or your company can achieve with automation for packaged applications? Let's explore it together. info@worksoft.com
