CONNECTIVE RPA
BUILD CHANGE-READY BOTS

Seamlessly reuse automation to quickly and easily create resilient bots you can trust.

WORKSOFT®

FAST TRACK RPA ROI
BUILD BOTS WITH SPEED & EASE

With Connective RPA from Worksoft, you can build better bots by leveraging the same automation assets you created using our codeless, easy-to-use test automation. And since Connective RPA is integrated with our Process Intelligence capabilities, you'll have a clear understanding of what to automate to maximize the value of your RPA efforts.
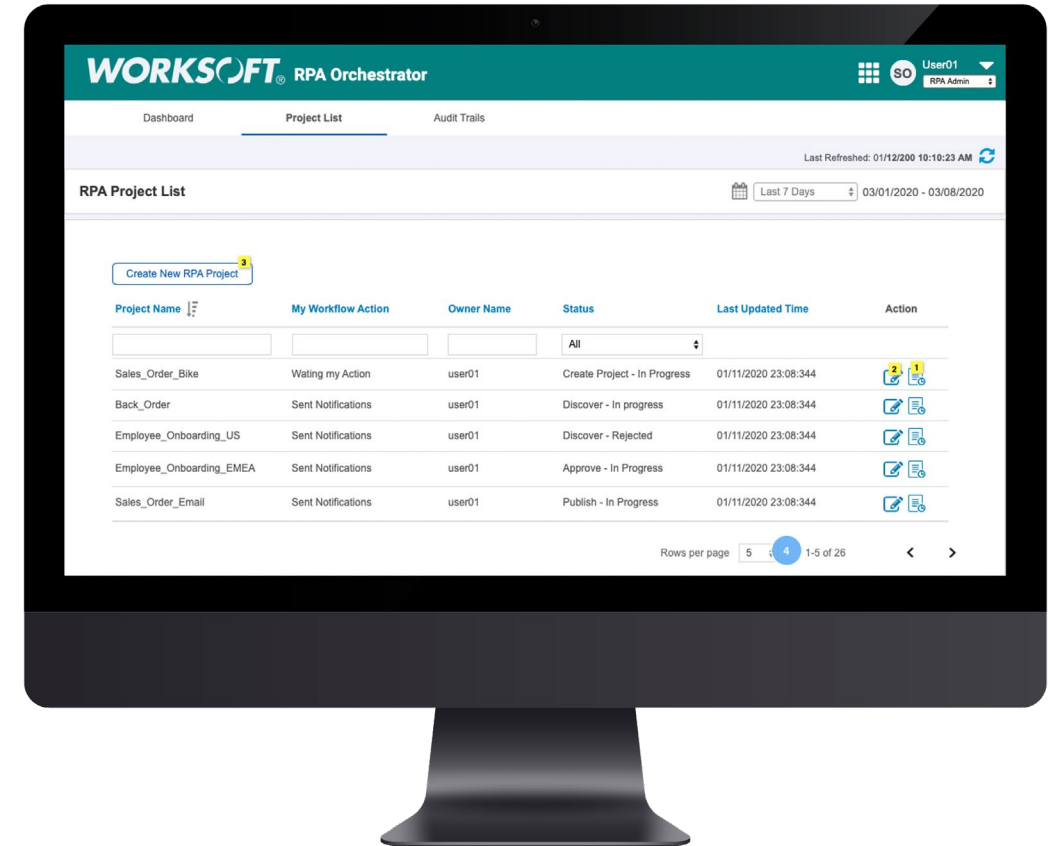

Reuse Automation to Realize ROI Faster

If your RPA requires complex script development or repetition of your testing or QA efforts, the efficiency and savings are diluted. Unlike systems that require costly and time-consuming bot development, our Connective RPA lets you repurpose process automation to quickly and easily move automation into production, avoiding duplicative efforts, expediting bot development, and facilitating faster ROI.

Accelerate Testing & RPA Strategies

Worksoft's Connective RPA combines key capabilities of our leading test automation—including navigating complex end-to-end processes, content and data handling, and dynamic change resiliency—with new RPA functionality for security, governance and lifecycle management in production, to create high-value RPA with unmatched speed, scale and peace of mind.

The RPA Orchestrator provides a control tower for scheduling, reporting and workflow management. And with encryption and non-repudiation, your RPA logs satisfy audit compliance requirements.

Scalable, practical and easy to use, Connective RPA maximizes value, reduces risk and speeds ROI.

DYNAMIC CHANGE RESILIENCE
FLEXIBLE, SELF-HEALING AUTOMATION

Don't leave change to chance.

Adapt dynamically with self-healing automation.

Eliminate Failure Points with Change Resiliency

Change is a given with release schedules, custom development, and evolving end-user demands. Worksoft's patented object action framework streamlines test maintenance and change management with a one-to-many approach.

Instead of brittle bots that leave change to chance and cannot adapt, our automation automatically replicates a change anywhere the object is used, saving time and resources.

How does it work? Our platform extracts every application it interacts with into a set of defined objects and attributes. These objects are separate from the automation steps and can be uniquely identified via the user interface.

Object definitions can be assigned to any object, whether simple or complex. Having a database of object types and definitions allows new objects to be evaluated against those definitions using machine learning techniques that automatically match new objects on the screen and classify them into the appropriate object type based on previous matches stored in the database.

A single update proliferates across the entire set of automation. One update to one object fixes thousands of steps in hundreds of different processes.

DIFFERENT BY DESIGN
EXPERIENCE RESILIENT RPA

Expedite ROI

Reduce the time and cost of building RPA with codeless automation platform.

Adapt to Change Dynamically

Adjust to process variations with ease using the same patented object action framework used for test automation.
Ensure Compliance

Satisfy audit requirement and gain peace of mind from security controls and oversight.

.

Eliminate Bot Fragility

Create more durable bots the first time by applying proven process automation

Scale Automation Value

Process automation reaps the greatest benefits when it's applied at scale. Repurpose efficiency-boosting automation in production.

Apply Deep Expertise

Leverage 20+ years of automation for complex enterprise applications.

"Having RPA capabilities for business users as part of a day-to-day process really gets our larger IT and business community excited about using automation to not only test faster but also complete business processes faster."

-Cardinal Health

CLOSED-LOOP AUTOMATION
THE CONNECTIVE AUTOMATION PLATFORM

One Resilient Platform, Endless Possibilities

Worksoft delivers unprecedented value from one cohesive automation platform for both pre- and post-production. The Worksoft Connective Automation Platform is a truly codeless, scalable automation solution that seamlessly connects process intelligence, business process testing and RPA to drive comprehensive process insight and continuous process improvement.

Built for Dynamic, Perpetual Change

Understand, validate and run even the most complex business processes in an environment of perpetual change. The

Worksoft platform uses a model-based object action framework to adapt dynamically to change and eliminate bot fragility and rework.

Closed-Loop Approach for Maximum Efficiency

With Worksoft, automation assets are no longer siloed between disparate systems and solutions. Instead, automation can be created, shared, and repurposed to understand, refine and run your business processes—all from a single platform. The result? Faster time to value with reduced risk and rework for your digital transformations.

It's time to think differently about automation, shifting both right and left, simultaneously.
