TEST AUTOMATION

ELEVATE PROCESS ASSURANCE

Worksoft's codeless test automation platform empowers complex organizations to speed innovation without sacrificing quality.

WORKSOFT[®]

CODELESS TEST AUTOMATION

SPEED TESTING. REDUCE RISK. LOWER TCO.

Build test automation for your enterprise packaged applications and beyond with the codeless continuous automated testing platform trusted by more leading global enterprises to accelerate projects, boost efficiency and mitigate risk for complex business processes.

Cut delivery timelines, reduce manual labor, and ensure quality end-user experiences with the industry's leading test automation solution for enterprise applications.

Worksoft's test automation allows you to easily create, maintain, share, and consume automated end-to-end business process tests as part of continuous testing, integration, and delivery cycles.

And since our platform is code-free, it enables non-technical business users and IT to work in parallel, speeding delivery times and reducing manual error.

“An end-to-end test that used to take a week of effort now takes an hour. A shorter cycle test that took an hour before, now takes a few minutes.”

-Carrier Global

Drastically reduce testing time without sacrificing quality.

AUTOMATION LIKE NO OTHER

UNMATCHED SCALABILITY & REUSABILITY

Create, Build & Maintain Automation with Ease

Our codeless, easy-to-use test automation requires no programming so you can start reaping the benefits of automation immediately. Our approach to automated testing lets you reuse and repurpose automation over and over. No need to reinvent the wheel with costly, time-consuming rework or coding.

Avoid Automation Islands with Reusable Assets

Once you create automation with Worksoft, your code-free objects are stored in a repository of reusable assets. Our object action framework and library of test artifacts enables enterprises to avoid islands of automation, sharing what they

build across projects, teams and departments to support scalable, enterprise-wide automation value.

Centralize Assets to Boost TCOE Effectiveness

Establishing a Testing Center of Excellence (TCOE) is a great way to accelerate the deployment of innovation and sharpen testing competency. A TCOE provides a framework for Agile methodologies, eliminates redundancies, ensures high business process quality, and reduces risk to the organization. It can be especially beneficial for navigating enterprise-wide projects like large-scale migrations. Worksoft's test automation is uniquely suited to support a TCOE thanks to its ease of use, reusable library of automation assets, and detailed process documentation that's generated automatically.

"You can easily apply one process to multiple processes. It's very reusable and easy to maintain. And you don't need to know programming."

-Metso Outotec

DYNAMIC CHANGE RESILIENCE

FLEXIBLE, SELF-HEALING TEST AUTOMATION

Adapt to Constant Change with Ease

Change is a given with release schedules, custom development, and evolving end-user demands. Worksoft's patented object action framework streamlines test maintenance and change management with a one-to-many approach.

Instead of brittle bots that leave change to chance and cannot adapt, our automation automatically replicates a change anywhere the object is used, saving time and resources.

A single update proliferates across the entire set of automation.
One update to one object fixes thousands of steps in hundreds of different processes.

How does it work? Our platform extracts every application it interacts with into a set of defined objects and attributes. These objects are separate from the automation steps and can be uniquely identified via the user interface.

Object definitions can be assigned to any object, whether simple or complex. Having a database of object types and definitions allows new objects to be evaluated against those definitions using machine learning techniques that automatically match new objects on the screen and classify them into the appropriate object type based on previous matches stored in the database.

DAY ZERO VALUE

AUTOMATION BENEFITS IN NO TIME

Flatten the Learning Curve & Automate Faster

For some organizations, standing up automation can seem like a daunting task. And many have tried using automation and failed, struggling with set up, maintenance and bots that can't handle change. We found a better way. Worksoft's unique approach to testing lets you go from zero to automation faster than any other industry solution.

"We actually had the solution itself up and running within a week, because the Worksoft platform is very lean in terms of infrastructure and very rich in functionality."

-Johnson Matthey

Unlike testing tools that require proprietary programming knowledge, there's no steep learning curve with our codeless platform. Just premium usability to start de-risking your operation right away and take advantage of significant tangible business benefits for efficiency and cost savings.

With Worksoft's Connective Automation Platform, business users can easily engage in building automation, just by doing their regular daily tasks. Our Process Capture capability records their step-by-step processes automatically, creating a digital record that can be used to quickly build automation, as well as generate documentation for compliance, migration planning and more.

90%

**TEST COVERAGE TO
MITIGATE RISK**

Test more processes to ensure flawless execution of your processes.

50K

**HOURS SAVED
ANNUALLY**

Save time and free up resources by completing tests 90% faster.

590%

**RETURN ON
INVESTMENT**

Risk mitigation, cost savings, and faster defect resolution really add up.

CROSS-APPLICATION TESTING

AUTOMATE THE WAY YOU REALLY OPERATE

Your business processes don't exist in a single application.

Neither does our automation.

Validate E2E Processes Across Applications

Automate your processes the way they run in the real world—across packaged apps, custom apps, web apps and beyond. Worksoft delivers the ability to test end-to-end business processes that span multiple applications, including ERP, mobile, web, and beyond. Instead of testing in siloed applications, we empower you to drive quality assurance, meet high expectations for end-user experiences, and ensure flawless delivery by testing across applications.

"One of the key benefits of Worksoft Certify is the peace of mind it brings to users and to the business by being able to easily validate business processes without manual effort." -Honda R&D

CERTIFY TEST AUTOMATION

90% FASTER. 100% CODELESS.

Accelerate Project Timelines

Validate complex processes in a fraction of the time of manual testing.

Lower Total Cost of Ownership

Drive efficiency and increase quality to experience tangible business benefits in the form of time, cost and resource savings.

Validate E2E Processes

From ERP to web and beyond, our test automation spans every application your business processes traverse.

Build Automation Fast

Create, manage and execute functional testing across applications and technologies with codeless automation.

Scale Automation Value

Reusable automation assets let you build and share automation across scripts, projects, and teams.

Adapt to Change Dynamically

Our test automation framework uses object definitions that empower you to keep pace with change without updating individual test scripts.

“This testing software from Worksoft is so easy to use. We are now reducing the effort vs. manual test execution and as a result, quality is increasing in our ERP rollouts.”

-Deutsche Telekom

CONTINUOUS TEST MANAGER

UNATTENDED REMOTE EXECUTION

Intercept Defects Before They Impact Your Business

Enable automated, unattended end-to-end tests at industrial scale for projects and ongoing operations to ensure every business process works, even when technology changes. Worksoft's Continuous Test Manager gives you centralized control for running remote tests on your schedule, automating everything from logging into machines to launching tests, reporting pass/fail results, and logging off when the test is done. Specify the order of automation tasks, define dependencies, set test times and frequencies, and check resource availability all from a single interface.

Maximize Off Hours

Schedule routine regression tests and even large, data-centric tests to run anytime, including nights, weekends.

Optimize Resources

Schedule tests unattended and on-demand in local and remote test labs.

DevOps Support

Run tests as part of CI/CD development processes for continuous testing.

Centralize Visibility

Monitor tests on premise, in the cloud, or in a hybrid environment and get a high-level view of all tasks and resources.

"We're now on a 24-hr testing cycle, so we can isolate the cause more efficiently, which also results in cost savings."

-Reliant Energy

CLOSED-LOOP AUTOMATION

THE CONNECTIVE AUTOMATION PLATFORM

One Resilient Platform, Endless Possibilities

Worksoft delivers unprecedented value from one cohesive automation platform for both pre- and post-production. The Worksoft Connective Automation Platform is a truly codeless, scalable automation solution that seamlessly connects process intelligence, business process testing and RPA to drive comprehensive process insight and continuous process improvement.

Built for Dynamic, Perpetual Change

Understand, validate and run even the most complex business processes in an

environment of perpetual change. The Worksoft platform uses a model-based object action framework to adapt dynamically to change and eliminate bot fragility and rework.

Closed-Loop Approach for Maximum Efficiency

With Worksoft, automation assets are no longer siloed between disparate systems and solutions. Instead, automation can be created, shared, and repurposed to understand, refine and run your business processes—all from a single platform. The result? Faster time to value with reduced risk and rework for your digital transformations.

It's time to think differently about automation, shifting both right and left, simultaneously.
